About Al-Bahar Group

Al-Bahar Group was founded in 1937 by Mr. Mohamed Abdulrahman Al-Bahar as a general trading company.

Over the decades, we've grown to become a leading force in regional markets across a variety of industries. Our diverse portfolio spans everything from consumer goods, home appliances, cutting-edge electronics, shipping, office technology, IT solutions, and beyond.

Partnering with global titans like Unilever, Canon, and GE appliances, we bring Kuwait's shoppers the latest in innovation and best practices. Our ethos thrives on collaboration, fostering enduring relationships that benefit both brands and customers alike.

More than just commerce, we're committed to community. Through our foundations and corporate social initiatives, we're dedicated to giving back, enriching the lives of those we serve. Join us as we continue our proud tradition of excellence and impact in Kuwait and the region.

OUR Vision, Mission & Values

VISION

To Always be the Most Trusted and Best-in-Class Partner.

MISSION

Delivering excellence and success by directing our values, talents, resources and expertise to maximize customer satisfaction and to achieve sustainable growth for all stakeholders.

VALUES

- We deliver on our commitments.
- We view our people as the source of our strength.
- We work together as a team.
- We listen, we care, we respect.
- We seek continual self and work improvement.

2021
New Partnership with Logitech, 3M, Lofratelli & Honeywell

2022
New Partnerships Hama, Lipton, Lago, & Germanica

2023
New Partnerships Tilda, Karcher & Marshall

2024

OUR Heritage

Our founder, Mr. Mohamed Abdulrahman Al-Bahar, stands as the visionary behind the growth of our company since its inception in 1937. His impact reverberates through the corridors of modern Kuwait, where he helped pioneer several cornerstones of the country's blossoming economy.

Mr. Mohamed Al-Bahar's influence also extended far beyond business. He was instrumental in shaping Kuwait's public institutions, including the Kuwait Chamber of Commerce, Educational Council, Health Council, and more, steering the nation towards modernity and self-sufficiency.

A true humanitarian, he espoused the ethos of community service across a variety of causes. Among his many accolades, he was honored with the "Order of the British Empire" (OBE) by Queen Elizabeth in 2003, a testament to his enduring legacy of excellence and compassion.

About BPC

Al-Bahar and Partners (BPC) was established in 1961 as a hybrid business leveraging our strengths as a financially solid group in distribution, and turnkey project delivery. We offer a diverse brand portfolio of world renowned products, supported by a full gamut of support services including supply chain, logistics, field operations and market activation teams.

BPC is comprised of two distinct service offerings,

BDS: Our Business Digital Solutions

PAT: Printing & Audio Technology

It is able to deliver comprehensive solutions in 5 core industries:

- ◆ Electronic Chip Cards and Payments
- ◆ Audio Visual Technologies
- ◆ Cyber Security & Digital Transformation
- ◆ Surveillance Automation
- ◆ Digitisation and Printing

About BDS

Our Business Digital Solutions (BDS) Division offers a comprehensive suite of services designed to enhance business operations and security. We support banking and payment systems by implementing various transaction methods and facilitating digital onboarding with secure, automated identification verification.

Our Internet of Things (IoT) solutions provide real-time data analysis and machine learning to optimize business processes, while our tokenization technology enhances data security. We also offer physical and digital issuance of financial instruments, advanced secure authentication methods, and robust networking solutions.

Our asset management ensures efficient IT resource use, and our storage solutions provide flexible, future-ready infrastructure. Additionally, we manage access control and surveillance systems, enable remote access and support, and deliver endpoint security and cybersecurity services, including asset management, SaaS management, and continuous threat monitoring.

OUR Vendors

Banking, Payment & Identity Solutions

We help Kuwaiti banks and financial institutions streamline their banking and payment services, offering diverse digital and physical transaction solutions through our partners.

Digital Onboarding and Consumer Engagement Platform:

We offer a modern onboarding experience that lets customers open accounts anytime, anywhere, boosting engagement and trust while minimizing abandonment and fraud. Our Digital Account Opening Solution streamlines the process, using advanced algorithms for document verification and comprehensive eKYC checks, ensuring compliance and generating detailed audit reports.

Tokenisation:

Tokenization replaces sensitive data like credit card numbers with unique tokens, which are useless without the original information. This enhances security and reduces fraud by protecting financial details even if systems are breached. It also enables secure, seamless payments through tokens, similar to Apple Pay and Google Pay.

Physical and Digital Issuance:

Banks use physical and digital issuance to provide financial instruments like credit and debit cards. Physical cards are used in-person and online, while digital issuance offers access via digital wallets and mobile apps. Digital issuance is growing in popularity for its convenience and fast access, but physical cards remain important for customers who prefer a traditional approach.

Secure Authentication:

Secure authentication is essential for protecting sensitive information. Traditional methods like passwords and PINs are no longer enough against advanced cyber threats. We offer solutions with cutting-edge authentication methods, including biometric verification (fingerprints, facial recognition, voice recognition), multi-factor authentication (passwords plus one-time codes), and behavioral analytics to detect and respond to potential threats.

IT, Infrastructure Support & Cloud

Flash and Cloud Storage:

Flash storage offers high-speed data access and transfer, while cloud storage provides scalable, cost-effective, and remote data management.

Unified Computing Platform:

Integrates computing, storage, networking, and virtualization technologies to streamline data center management and boost operational efficiency.

Remote Access and Support:

Facilitates seamless collaboration, troubleshooting, and maintenance of systems, enhancing productivity and minimizing downtime.

Data Center Management:

Includes the design and implementation of network cabling, computing systems, firewalls, and security products to ensure business continuity.

Information & Cyber Security Portfolio

Networking:

Our solutions form the backbone of your organization, ensuring seamless communication, data sharing, and collaboration across devices and locations. We enhance network security, scalability, and dependability while simplifying management and supporting digital transformation.

Asset Management:

Our IT asset management (ITAM) solutions track and manage IT assets throughout their lifecycle, providing crucial data for strategic decision-making. We focus on optimizing costs by managing asset use, extending asset lifespans, and avoiding unnecessary upgrades.

Endpoint Technology:

We prevent breaches with faster, more effective security solutions. Our approach identifies 96% more threats in half the time and makes security teams twice as effective, with investigations 66% faster, all while reducing costs and avoiding business disruptions.

Secure Authentication:

Essential for protecting sensitive information, secure authentication goes beyond traditional passwords and PINs to combat sophisticated cyber threats. We offer advanced solutions, including biometric verification (fingerprints, facial recognition, voice recognition), multi-factor authentication (passwords plus one-time codes), and behavioral analytics to detect and respond to potential security risks.

Data Protection & Security:

Involves measures and technologies to protect data from unauthorized access, theft, corruption, and loss, ensuring its confidentiality, integrity, and availability.

Storage Solutions:

Modernize your infrastructure with flexible, future-ready storage. We offer Container Storage as a Service, VDI solutions for remote work, DevOps solutions for enhanced productivity, VMware optimization, and Bare Metal as-a-Service for comprehensive, on-demand support.

The Internet of Things (IoT):

IoT connects physical objects with sensors and software to exchange data over the internet, from household items to industrial tools. With over 10 billion devices now and an expected 22 billion by 2025, IoT drives business efficiency and innovation. We offer SaaS applications that analyze IoT data, providing real-time insights through dashboards. Our solutions use machine learning to monitor performance, detect anomalies, and automate responses, helping businesses enhance processes across supply chains, customer service, HR, and finance without overhauling existing systems.

Access Control:

Our access control solutions manage and regulate permissions to data, systems, and physical spaces, protecting sensitive information and ensuring data integrity.

We use user authentication, biometrics, access cards, and role-based restrictions to safeguard against breaches and comply with privacy regulations.

Surveillance Solution:

Enhance security with our advanced video surveillance technology. We provide a range of products including CCTV cameras, HD IP security cameras, DVRs, video door phones, cloud surveillance, scalable video storage, and premium video management software.

Remote Access and Support:

Our 360° cloud-based remote connectivity solution supports PCs, phones, OT machinery, and embedded platforms globally. We also offer an all-in-one AR platform to help industrial workers improve efficiency and reduce error rates.

Cyber Security Asset Management:

Our solution aggregates and analyzes asset data to provide a comprehensive cyber asset inventory, uncover security issues, and automate remediation. We offer automated policy enforcement, security control coverage, and asset data enrichment.

SaaS Management:

Discover and manage all your SaaS applications, identify risks and misconfigurations, and optimize IT management and costs. We provide multi-layered visibility, risk assessment, and control over SaaS spending.

Cyber Security Managed Services:

We offer 24x7 managed Security Operations Centers (SOC), incident response, security assessments, threat modeling, source code review, penetration testing, and cloud security consulting.

Our services adapt to your evolving business needs and include e-training and awareness programs.

About PAT

Our Print & Audio Technology Division is Kuwait's top choice for advanced printing and audio-visual solutions. We provide high-quality printing services, secure digitization, and high-tech audio-visual tools like interactive displays and video conferencing. Working with brands like Canon, Epson, and Logitech, we create tailored solutions to fit your needs.

Printing & Imaging Services

Partnering with top brands like Canon and Epson, Al-Bahar & Partners offers a broad range of printing and digital imaging solutions. We work closely with our customers in Kuwait to provide the best services and products.

ID Card Printers:

High-quality, reliable solutions for producing secure identification cards.

Planned Printing Solutions:

Customized printing plans tailored to meet your specific needs and optimize efficiency.

Managed Print Services (MPS):

Comprehensive management of your printing environment to reduce costs and improve productivity.

Secure Digitization:

Advanced digitization services ensuring data security and integrity.

Managed Services:

Full-service management of your printing and imaging needs.

Document Verification:

Reliable and secure document verification solutions.

Cameras:

High-performance cameras for both professional and personal use.

Home & Office Printers:

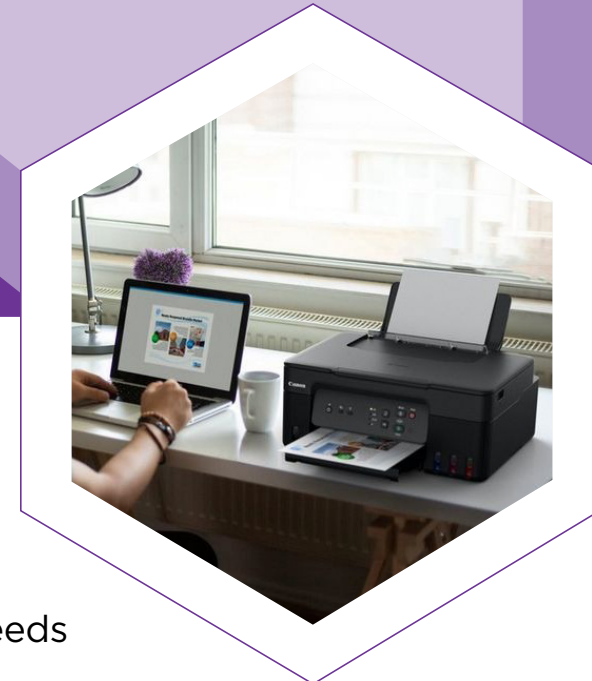

A wide range of printers designed to meet the needs of both home and office environments.

Wide Format Printers & Scanners:

Advanced solutions for large-scale printing and scanning needs.

Production Printers:

High-capacity printers designed for professional production environments.

Audio Visual Services

PAT partners with top brands like Logitech to create custom audio-visual solutions for schools, conference rooms, and large venues.

With years of experience, we offer:

Interactive Touch Displays:

Modern displays for better engagement and teamwork.

Smart Classroom Solutions:

Innovative audio-visual tools for interactive learning.

Video Conferencing:

High-tech systems for smooth communication and collaboration.

Digital Signage:

Attractive signs to grab attention and share information.

Meeting Room Management:

Smart solutions to make meeting spaces more efficient.

Service Center

The Service Center at Al-Bahar Customer Care Center provides comprehensive professional support services for our BDS and PAT customers.

Our offerings include, but are not limited to:

Delivery & Installation:

Efficient delivery and expert setup for all of our devices and electronics.

Technical Support:

Expert troubleshooting and assistance to resolve product issues.

Repair & Maintenance:

Comprehensive repair, replacement, and maintenance services to ensure optimal performance using quality approved parts.

Warranty Services:

Clear warranty information and streamlined claims processing for our brands.
